#### Abstract

This paper seeks to investigate the effectiveness of change management and the level of commitment of top management of manufacturing firms in South Eastern Nigeria. Data were collected from two hundred and five (205) participant manufacturing firms who were financial members of Manufacturers Association of Nigeria (MAN). The Yamane's statistical formula was utilized for sample size determination. 267 copies of questionnaire were distributed to top and middle management staff who were knowledgeable about the technical information needed for implementing change management. Using Chi-square (X) statistic and Pearson product moment correlation coefficient, the study reveals that change management improves the level of performance and that there is a very strong positive relationship between commitment of top management, middle management and success rate of implementation in the selected firms. Based on these findings, the paper advocates that leaders and top management of these organizations should make the process of change management more conducive and organization friendly. Again employees who are going to be affected by change should earlier be identified with respect to their interest, knowledge and attitudes before implementation of change.

Keywords: empirical investigation, impact, change management, manufacturing firms

## 1. Introduction

## 1.1 Background of the Study

Many writers have characterized today's business environment as "hyper-competitive (D'Aveni, 1994; and Volberda, 1996), high velocity (Brown and Eisenhardt, 1997) or shaped by 'jolts' (Meyer, Brooks and Goes, 1990). In emerging economies such as the Nigeria one, these environmental features have been exacerbated by the globalization drive. In these circumstances, rapid adaptive organizational processes are essential to a firm's survival and success. From a social science perspectives, organizational adaptation is the ability of an organization to change itself or the way in which it behaves in order to survive in the face of external changes which were not predicted in any precise way when the organization was designed (Tomlinson, 1976). This definition confirms March's assertion that adaptation is essential to survival. Those organizations that do not adapt seem destined to expire (March, 1995).

In today's organization, change is inevitable and managers all over the world are adapting to changing market conditions and at the same facing the need for creating a proactive rather than a reactive managerial system. They are searching for ways to manage an increasingly complex technology and more sophisticated workforce or teams. To accomplish diverse goals, managers need more than piecemeal ad-hoc change programmes dealing only with current crises. They need change management techniques to prepare for future organizational competitive challenges, Drucker cited by Herbert (2002:2) succinctly put it in corporate parlance. "Managers must learn to build and manage a human group that is capable of anticipating the new, capable of converting its vision into technology, products, processes and services, willing and able to accept the new". Attempts to implement change management have been many and wide-ranging, but the promises made in its name have remained unfulfilled. There are three main causes for this:

Mistakes continue to be made at the shop-floor level;

<sup>&</sup>lt;sup>1</sup> Department of Business Management, Godfrey Okoye University Enugu, Thinkers' Corner Enugu, Nigeria

<sup>&</sup>lt;sup>2</sup> Department of Accounting/Finance, Godfrey Okoye University Enugu, Thinkers' Corner Enugu, Nigeria

- Bad examples have brought high-level management into discredit. In today's organizations many top executives start out heavily in the red as far as their credibility is concerned.
- The internal change story, circulated by organizations' communication channels to awaken the readiness and commitment of those affected, is frequently seen as pure rhetoric and rhapsodizing about change (Doppler, 2006).

Inspite of the aforementioned causes change remains a necessity. It is the only way for organizations to consistently adapt to new trends, react to competitors and meet the needs of their customers. The challenge facing Nigerian organizations therefore is not to avoid change and attain a state of changelessness. It is to manage change. That is seek change, initiate it, keep looking for something new to add, something old to discard and do all these with minimum undesirable effects as possible. Research on organizations have shown that organizations that do not change are compelled to change from existence to non-existence (Ejiofor, 1998 and March, 1995). Given the benefits of organizational change and the difficulty of successfully bringing it to fruition, there has been much debate over the last, two decades on the most appropriate way to bring about change (Pettigrew, 1990; Stacey, 2003; Dawson, 2003; Igwe, Chibuike and Alinno, 2012). There is a consensus amongst academics and practitioners that organizations are facing unprecedented levels of change and as a result the need to manage change and douce its effects successfully should be a core organizational competence.

## 1.2 Statement of the Problem

The contribution of the manufacturing sector to the Nigeria's Gross Domestic Product (GDP) is currently less than five percent. The current GDP figure of \$194 billion dollars places the country in the 41st position, according to the International Monetary Fund (IMF) estimates of 2012 (The Guardian, 2012). At the heart of this problem of the real sector is the problem of competitiveness. The challenges for the industrial production and indeed real sector of the economy had persisted for over twenty years. Some of these challenges include: epileptic power supply; near absence of adequate distribution channels and a top-grade transportation network; rising cost of automotive gas oil and gas as well as uncoordinated tax administration system. Others are smuggling and trade malpractice; incessant increase in the monetary policy rate; difficulty in accessing long-term credits for small-scale manufacturing firms; achievement of a single digit interest rate and insecurity of lives and property due to nefarious activities of hoodlums, terrorists, militants and crude oil picketing mafias/pirates. The concomitant effects of all these challenges is that many manufacturing firms in Nigeria had decommissioned their plants and send their workers home to an uncertain future. Some of the manufacturing organizations had relocated to other West African nations with better macro-economic stability (Newswatch, 2009). Even the manufacturing firms seem not to help matters. There are issues with haphazard change management techniques in these organizations. The top echelons of the manufacturing firms are suspected of serving only their interest by manipulating relevant change management data. The implications of the above scenario pose a tremendous threat to both the manufacturing firms and the nation. To the firms they will not be able to improve productivity and create needed jobs. On the side of the government, the revenue accruable to the government by non-performing firms would be missed greatly. Thus the government's much trumpeted vision of the country joining the league of 20 most industrialized economies come 2020 is gradually turning into a slogan like many others before it such as Housing for All, Water for All etc.

## 1.3 Objectives of the Study

In order to develop an expanded theoretical foundation and understand how change management can be put into practice in Nigerian organizations, the objectives of the study are as follows:

- To find out the effectiveness of change management in improving organizational performance.
- To examine the level of commitment of top and middle management in the implementation of change management.

## 1.4 Research Questions

From the foregoing, the following research questions become imperative.

- 1. What is the effectiveness of change management in improving the level of performance in the selected organizations?
- 2. To what extent does top and middle management's commitment improves the success of change management project.

## 1.5 Statistical Hypotheses

In view of the above research questions, the following hypotheses were formulated to guide the study:

- i. Change management is effective in improving the level of organizational performance.
- ii. There is a correlation between the commitment of top and middle management and success of change management project.

#### 2. Theoretical Considerations and Review of Related Literature

Organizations can be viewed as dynamic systems of adaptation and change - two terms that are often used interchangeably that contain multiple parts which interact with one another and the environment (Morel and Ramanujan 1999). Existing views on adaptation and their definition of change differ with respect to;

- (1) Whether the pressure for change reside within the organization or within its environment.
- (2) Timing
- (3) The radical nature of change. Change is often regarded as an organization's response to changes in external factors: threats and opportunities (Kraatz, 1998). As shown by Siggelkow and Levinthat (2005) authors such as Chandler (1962); Lawrence and Lorsch (1967) alluded to internal reasons for change and most life cycle models adhere to this perspective. A more inclusive view on change suggests that both external and internal pressures for change are relevant.

Defining change management is tough under any circumstances write Holland and Skarke (2003:24), especially in the context of new technology being implemented in an existing organization. Mention the issue of change management and a typical response to the question will be, "Does it really matter in the real word?" The answer to that question is "of course". After all definitions are important because they can provide clarity. In the simplest sense, change management means the process of helping a person, group or organization change. The world "management" implies an effort to plan the change and exert influence over other people in the process. Thus change management implies purposeful effort to bring about change. Kudray and Kleiner (1997:18) define change management as "the continuous process of aligning an organization with its market place - and doing it more responsively and effectively than competitors". For Anderson and Anderson (2001) Change management is seen as a set of principles, techniques and prescriptions applied to the human aspects of executing major change initiatives in organizational settings. Its focus is not on what is driving change (technology), reorganization plans, mergers and acquisitions (M & A) Udeh & Igwe, 2013, globalization etc. but on 'how' to orchestrate the human infrastructure that surrounds key projects so that people are better prepared to absorb the implications affecting them. Change management is one of the Human resource management (HRM) processes that contributes to or underpins the activities of human resources department or unit in an organization. It is concerned with advising and assisting with the facilitation of change in organizations in response to changes in the environment and the introduction of new organizational structures and systems, human resource policies and practices (Armstrong, 2005). Organizational change has also been referred to as organizational development and organizational transformation (Cummings, and Worley, 2005). For this paper change management is seen as the process that is used to help all the stakeholders adapt successfully to the changes that are taking place in the organization. It is meant to shift stakeholders from their current state to a desired future state.

According to the Greek Philosopher Heraclitus, "There is nothing permanent but change". By that he meant that everything is always in a flux. As the Chinese adage suggests no one can step in the same river twice, because the river is always in motion and is therefore always changing. The world has seen radical change in global markets and national economics. The exit world is getting more interconnected and the economies and industries have become global. There are crises in financial institutions, the housing market, education, health care and emerging markets to mention only a few major issues. On the positive side nanotechnology, green technology, unified communications technology, visualization technologies, social software and information systems - the whole technology world will bring advances beyond our imagination. These technologies will inevitably impact the way we manage in different organizations.

Rothwell, Prescott and Taylor (1998, 2008) had identified six key changes that would have the greatest impact in the workplace and workforce over the next ten years. The list is as highlighted below:

- Changing technology;
- Increasing globalization;
- Continuing cost containment

- Increasing speed in market change
- The growing importance of knowledge capital; and
- Increasing rate and magnitude of change

Changing technology refers to rapid advancement in human knowledge. Increasing globalization refers to the impact that rapid transportation and global communications have on how organizations conduct business. Continuing cost containment refers to efforts undertaken by organizations to address declining profit margins, brought by the ease of price comparison through web-based technology. To maintain a profitable business, organizations are making efforts to improve profits by reducing the costs of business operations. Increasing speed in market change refer to the continuing importance of beating competitors to the punch by meeting the rapidly changing tastes of consumers. The growing importance of knowledge capital refers to the key value-added capabilities of human creativity and innovation to identify new businesses, products, services and markets. Finally, the increasing rate and magnitude of change refers to the increasing speed and scope of changes that are occurring. In short change itself is changing and posing ever-more-daunting challenges for business leaders who need to respond in real time to breaking events.

A search through the literatures (Brown and Eisenhardt (1997); Ejofor (1998); Herbert (2002); Robbins (2005); Kieffer, (2005) Pryor, Taneja, Humphreys, Anderson and Singleton, (2008) revealed that each trend influences the others. The definition of each trend may vary by organizational context and even functional area. The trends are related in that many are the root causes of other trends. And each trend required new competencies from leaders to respond to or even anticipate the changes brought by each trend. Nowadays these changes can be seen almost in all types of organizations (the manufacturing firms inclusive) in Nigeria. They constitute organizational downsizing, continuous improvement, globalization of industries, Mergers and Acquisitions (Palmer, Dunford and Akin, 2009); Udeh and Igwe, (2013).

Regardless of change speed, organizational change is the movement of an organization from the existing plateau toward a desired future state in order to increase organizational efficiency and effectiveness (Cummings and Worley, 2005; George and Jones, 2002; Pryor and et al, 2008). Conclusions drawn by these researchers are that the driving motives for change management are the result of the need to constantly improve productivity and efficiency (Arnetz, 2005, Pryor et al, 2008, Igwe, Chibuike and Alinno, 2012). This creates the need for further studies into the effect of such change management on manufacturing firms such as this research, which will inform policies linked to the federal government's desires of the country joining the league of twenty (20) most industrialized economics come 2020

In essence what the successful Nigerian manufacturing organizational leaders and managers should strive to do is to transform their respective organizations by developing and deploying new visions, missions, values, goals, strategies and structures that show a continuously changing organizations with capacity and capability to undergo transformation. This would help them key into the transformational agenda of the current Nigeria Federal Administration. This definitely makes such organizations to proactively drive innovations to the extent that they become major players for change within the macro-economic environment.

## 3. Methodology

For this study, the survey research method was adopted (Eboh, 2009). The objective of the study was to investigate the impact of change management implementation as applied to the manufacturing sector in South East Nigeria. 205 participant manufacturing organizations were identified through published literature such as trade journals and data base of Manufacturers Association of Nigeria (MAN). The study lasted for two years (2009 – 2011). The instruments for data collections were questionnaire and structured interviews. The questionnaire was administered to top management and middle management staff of 267 respondents using Yamane (1964) for sample size determination (Appendix I). The questionnaire and structured interview questions were designed by the researchers. Some colleagues from the Faculty of Business Administration, University of Nigeria Nsukka who were experienced and knowledgeable in the construction of research instruments validated the instruments. Consequently, some items were added while a few others were re-written. The computed sample size was allocated proportionally to the selected states depending on the proportion of the manufacturing firms that came from each state using Kumar (1976) proportional allocation formula (Appendix ii). The questions were optioned using five (5) Likert type of responses namely: Strongly Agree, Agree, Neutral, Disagree and Strongly Disagree.

As indicated earlier, the study included interviews with senior managers who agreed to be interviewed. They were asked to indicate their availability and eagerness in the questionnaire. These managers were influential in developing change management interventions and so powerful in influencing implementation strategies. As it was expected that

Human Resource (HR) practitioners, would be most likely to provide reliable information on change managements. Managers in the Human Resources departments were identified and chosen for this exercise.

A total of 267 copies of the questionnaire were administered out of which seven (7) were cancelled while ten (10) were not returned. As a result, 250 (93.6 percent) were used for analysis. A combination of Chi-Square statistic and Pearson Product Moment correlation coefficient were used to test the stated hypotheses at 0.05 level of significance. These techniques were adopted because the samples of the variables were randomly selected from the population.

Table 1. Distribution of questionnaire among the South East states of Nigeria (Man members)

S/N	State	Number of Selected Organizations	No. of Top Management and Middle Management Staff	No. of Questionnaire served
1.	Abia	35	105	35
2.	Anambra	135	540	179
3.	Ebonyi	Nil	Nil	-
4.	Enugu	22	88	29
5.	Imo	13	72	24
	Total	205	805	267

#### 4. Result and Discussion

In this paper, the impact of change management implementation on selected manufacturing firms in Southeast Nigeria was investigated. In this section, the findings in relation to the objectives of the study are presented and discussed:

i. The extent change management is effective in improving organizational performance. The finding of this objective reveals that change management was effective in improving the level of performance in the selected organizations in South East Nigeria. This result agrees with Anderson and Anderson, (2001); Dawson, (2003) and Armstrong, (2005). These authors see change management as a set of principles, techniques and prescriptions applied to the human aspects of implementing change initiatives in organizational settings. Again Kudray and Kleiner, (1997) had remarked that change management is the continuous process of aligning an organization with the realities of its market place and doing more responsively and effectively than competitors. It is heart-warming to note that many of the sampled firms agreed that people who would be affected by change management implementation must be involved in the work of structuring it from the outset. This shows that some of the manufacturing firms are aware of global practices in change management implementation. Table 2 gives more insight.

## **Computation of Hypothesis One (1)**

Change management is effective in improving organizational performance of the selected manufacturing organizations.

The test statistic used is the chi-square,  $X^2$ .

### **Relevant Questions:**

- Change management can improve employees' performance and productivity
- Change management can lead to a better utilization of employees in this organization.

Table 2. Contingency table on the effectiveness of change management in improving organizational performance

OPTIONS			RES	SPONSES	S	
	SA	A	N	DA	SD	Row Total
Change management can improve employees' performance and productivity						
	120	80	10	30	10	250
Change management can lead to a better utilization of employees in the organization						
	110	90	20	30	0	250
Column Total	230	170	30	60	10	500

Source: Field Survey, 2011.

Where

SA - Strongly Agree

A - Agree

N - Neutral

DA - Disagree

SD - Strongly Disagree

Table 3. The computed observed and expected frequencies of sample results

OPTIONS			RESPO	NSES		
	SA	A	N	DA	SD	Row Total
Change management can improve employees' performance and		80(85)		30(30)		
productivity.	120 (115)		10 (15)		10 (05)	
Change management can lead to a better						
utilization of employees.	110 (115)	90 (85)	20 (15)	30 (30)	0(05)	250
Column Total	230	170	30	60	10	500

Test Statistic =  $X^2$ Degree of Freedom = 4 Level of Significance = 0.05 Critical value = 9.49 Calculated value = 14.35

**Decision:** Since the computed value (14.35) is greater than the critical value (9.49), we conclude that change management is effective in improving the level of organizational performance of the selected manufacturing organizations.

ii. The extent top management and middle management are committed in the successful implementation of change management. The findings of this objective reveal a very strong positive relationship between commitment of top management and success rate of change management projects amongst the sampled manufacturing firms in Nigeria. Table 4 and appendix iv attest to this assertion. This finding agrees with the writings of Currie (1999); Huy (2002); Floyd and Lane (2000) who in their different perspectives view middle management as strategic assets championing new ideas, facilitating adaptability and synthesizing strategic information for senior managers in formulating strategies. Engagement of top management goals and support are a sine qua non for a successful change management readiness (Igwe, Chibuike and Alinno, 2012). Lack of genuine management support is one of the most frequent causes of implementation failure. However, this investigation reveals that the sampled manufacturing firms seem to place more emphasis on organizational downsizing, continuing cost containment and value added capabilities of human creativity and innovation to survive the inherent harsh manufacturing environment in Nigeria. (Table 4 throws more light).

Table 4. Contingency table for the correlation between the commitment of top management and success of change management project

N (paid values) of X and Y	In this organization the level of commitment of top management is high = X	Provision of Fund for a successful change management project was provided by top management	X2	Y2	XY
Strongly Agree	100	120	10,000	14,400	12,000
Agree	60	80	3,600	6,400	4,800

N = 5	$\sum X = 250$	$\sum Y = 250$	,		$\sum XY = $ 18 300
Disagree Strongly Disagree	30	20	900	400 100	300
Neutral	30	20	900	400	600

Source: Field Survey, 2011.

Test statistic = Pearson's product moment correlation coefficient

Degree of Freedom = N-2=3

Number of Pairs = 5 Level of significance = 0.5 Critical value = 2.35 r (rho) = 0.9809

**Source:** Statistical Analysis (Appendix IV).

**Decision Rule:** Reject  $H_0$ , if t computed is > t critical, otherwise do not reject (accept).

**Decision:** The t computed (8.49) > t critical (2.35). Then we accept the alternative hypothesis which states that when the level of top management commitment is high in the implementation of a change management project, the success rate of such project tends to be higher.

## 5. Conclusion and Recommendations

This study had investigated the effectiveness of change management in improving organizational performance and the relationship between the level of commitment of top and middle management in success of implementation from 2009 to 2011. The study revealed that change management was effective in improving the level of organizational performance and that the commitment and genuine support of top and middle management were a sine qua non for success in managing its implementation.

In relation to the objectives, the researchers made the following recommendations:

- i. Leaders and top management of manufacturing organizations have to understand the requirements of managing change among employees by making the process more conducive and environment friendly. This will improve the positive attitude, the internal core and dynamic capabilities of employees in adapting to changes in their internal and external environment.
- ii. Employees who will be affected by change management implementation must be involved in the work of structuring it from the outset. The minimum form of involvement is constant communication and not information.
- iii. In order to get employees affected involved, they need to be identified at the beginning with respect to their interest, knowledge, attitude towards implementation and their mental state. This is because employees who are passing through major life transitions such as bereavement, relocation hassles, redundancy threats are never committed to implementing change management project.
- iv. Verbal reinforcement of new behaviour that fit into the organizational change should be encouraged by organizational leaders and managers. This will increase employee repetition of those new change behaviours expected of them. This will help to extinguish old behaviour and allow the new take root in the individual employee.
- v. Nigeria government at all levels should continue to create and provide the needed environment for these manufacturing firms to survive and thrive bearing in mind that the operating environment is still far from conducive and friendly.

## Acknowledgements

The authors would like to thank Prof. F. C. Eze, the registrar of Godfrey Okoye University, Enugu and the dean of the faculty of Management and Social Sciences, Prof. Eugene Nwadialor for their invaluable supports and insights.

## Appendix I. Sample size determination using Yamane (1964) formula

$$n = \frac{N}{1 + N(e^2)}$$

Where

n = Sample size

N = Finite population

e = Level of significance

I = Unity (a constant)

$$n = \frac{805}{1 + 805 (0.05)^2}$$

$$= \frac{805}{1 + 2.0125}$$

$$=$$
  $\frac{805}{3.0125}$ 

= 267.22

## Appendix II. Questionnaire distribution format

Applying Kumar (1976) proportional allocation formula for the manufacturing firms in South East States of Nigeria.

$$nh = \frac{n (N h)}{N}$$

Where

Nh = Group population from each stratum

n = Overall sample size

N = The overall population

nh = Sample size from each stratum, in this case each state.

For Abia State:

## For Anambra State

$$nh = \frac{n (N h)}{N} = \frac{267 X 540}{805} = 179$$

For Ebonyi State: None of the manufacturing organization in the state is a bona fide (financial) member of Manufacturing Association of Nigeria (MAN) at the time of this investigation.

For Enugu State:

$$nh = \frac{n (N h)}{N} = \frac{267 X 88}{805} = 39.2$$

For Imo State:

$$nh = \frac{n (N h)}{N} = \frac{267 \times 72}{805} = 23.88$$

## **Appendix III**. Computation of Hypothesis one from sample result

Test statistic: The Chi-Square  $(X^2)$  is applied at 5 percent level of significance.

Let 
$$X = 0.05$$

Degree of Freedom, D.F. 
$$= (r-1)(c-1)$$
  
 $= (5-1)(2-1)$   
 $= (4)(1)$ 

Critical value = 9.49

To compute the expected we apply,

eji = 
$$\frac{\text{(row total) (column to tal)}}{\text{Overall total}}$$

$$= \frac{250 \times 230}{500} = 115$$

$$= \frac{250 \times 170}{500} = 85$$

$$= \frac{250 \times 30}{500} = 15$$

$$= \frac{250 \times 60}{500} = 30$$

$$= \frac{250 \times 10}{500} = 05$$

$$X_{i}^{2} = \frac{0j - ej}{ej}$$

$$= \frac{(120 - 115)^{2}}{115} + \frac{(10 - 115)^{2}}{115}$$

$$= 0.22 + 0.22$$

$$X_{ii}^{2} = \frac{\text{oj} - \text{ej}}{\text{ej}}$$

$$= \frac{(80 - 85)^{2}}{85} + \frac{(90 - 85)^{2}}{85}$$

$$X_{iii}^{2} = \frac{(10 - 15)^{2}}{15} + \frac{(20 - 15)^{2}}{15}$$

$$= \frac{25}{15} + \frac{25}{15}$$

= 0.29 + 0.29

$$X_{iv}^{2} = \frac{(30 - 30)^{2}}{30} + \frac{(30 - 30)^{2}}{30}$$

$$X_{v}^{2} = \frac{(10 - 05)^{2}}{05} + \frac{(0 - 05)^{2}}{05}$$

$$= \frac{25}{5} + \frac{25}{5}$$

$$= 05 + 05$$

Total = 
$$0.44 + 0.58 + 3.33 + 0 + 10.00 = 14.35$$

Appendix IV. Computation of hypothesis two

$$\gamma = \frac{N \sum X Y - (\sum X)(\sum Y)}{\sqrt{[N \sum X^2 - (\sum X^2)][N \sum Y^2 (\sum Y)^2]}}$$

By substitution

$$= \frac{5(18,300) - (250)(250)}{\sqrt{[5(16,300) - 250^2][5(21,700) - (250)^2]}}$$

$$= \frac{91,500 - 62,500}{\sqrt{[81,500 - 62,500][108,500 - 62,500]}}$$

$$= \frac{29,000}{\sqrt{[19,000][46,000]}}$$

$$\gamma = \frac{29,000}{874,000,00}$$

$$\gamma = \frac{29,000}{29563.49}$$

$$\gamma = 0.9809$$

The computation of  $\gamma$  gave a value of 0.9809 indicating a very strong positive relationship between commitment of top management and success of change management project.

Transformation of the result of Pearson's Product Moment Correlation to t-test is as follows

$$t = \gamma \sqrt{\frac{N-2}{n-r^2}}$$

Where

N-2 = degree of freedom

n = number of paid values

t = t-statistic

 $\gamma$  = 0.9809 = correlational coefficient

$$t = \frac{0.98\sqrt{\frac{5-2}{1-0.98^2}}}{0.98\sqrt{\frac{3}{1-0.9604}}}$$

$$= \frac{0.98\sqrt{\frac{3}{0.04}}}{0.04}$$

$$= \frac{0.98\sqrt{75}}{0.98\sqrt{75}}$$

$$t = 0.98 \times 8.660$$

8.49

**Appendix V**. List of financial member companies in Anambra/Enugu/Ebonyi States Branch arranged according to sectoral grouping

## A. FOOD, BEVERAGES & TOBACCO GROUP

### NO. NAMES

### **ADDRESS**

1. Bons West Africa Ltd

Km2 Enugu/Onitsha Exp. Road, Trans-Ekulu Box 21,
